

MDynamic

Overall height: up to 12 m

Payload: max. 100 kg

Length: up to 90 m

Storage capacity:

up to 16,000 containers

Handling capacity:

up to 135 double cycles/hour

Travel speed:

360 m/min

Lifting speed:

180 m/min

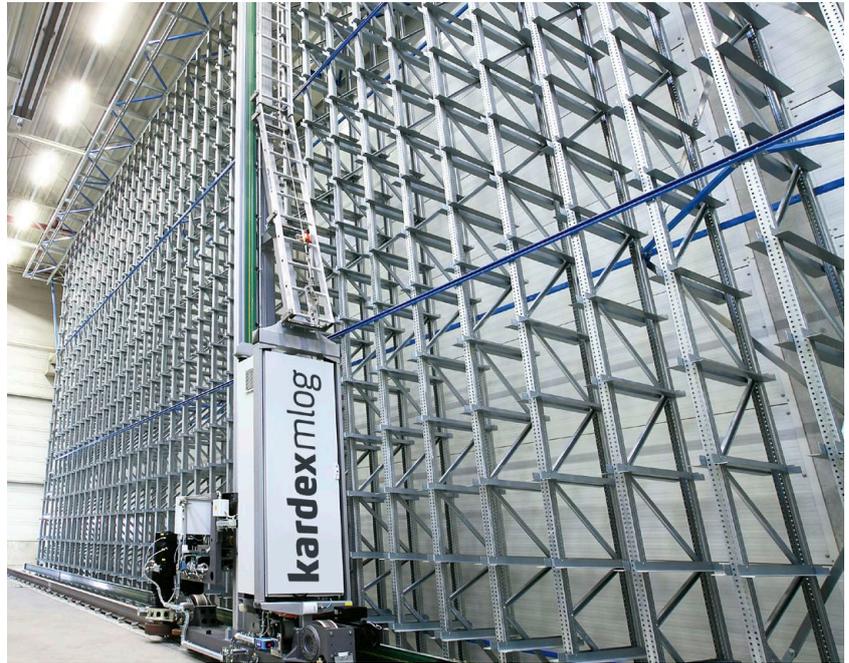

Load carriers:

Containers 600 x 400 mm,

Heights up to 420 mm

Conveyor system:

Picking module (max. 4)

The MDynamic system solution is a standardised and modular system designed for the handling of containers. It consists of the components storage and retrieval machine, conveyor system, racking and warehouse management system.

The storage and retrieval machine with freely selectable overall heights between 5 m and 12 m is equipped with telescopic forks and belt conveyor. It achieves top speeds of 6 m/s at accelerations of up to 3 m/s². This means that up to 135 double cycles per hour can be achieved, depending on the dimension of the overall system.

The conveyor system consists of a picking module with a picking station. Up to two modules can be connected to the side of the racking. They can be integrated in the racking in any desired position without any structural modification.

The racking is designed for single-deep storage of containers of up to 100 kg and is available in variable sizes – height up to 12 m, length up to 90 m. A storage capacity of up to 16,000 containers is possible depending on the size of the warehouse and height of the containers.

The material flow control and warehouse management system

is user-friendly and easy to operate. Even in the basic configuration, it offers all the functionalities of a professional warehouse management system. The software can be expanded to include options such as inventories, batch tracing and serial number management, depending on requirements.
